Handling the Future Today

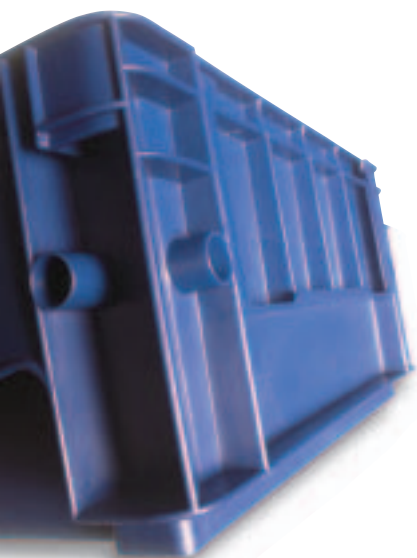

Handling the Future Today

Arca Systems' mission is to improve our customers' supply chain through the implementation of highly qualified plastic products. In addition we supply services, which together with the products, reinforce the added value we bring to our customers.

For more than 30 years, we have been producing materials handling systems that take account of our guiding principles – concern for the environment and the needs of our customers. The result is a series of packaging solutions, which are based on returnable systems, utilising materials, which can be recycled. Our experience proves that economic benefit goes hand in hand with environmental concern.

The range of products presented in this catalogue is merely a base. In acquiring experience from a variety of industries, worldwide, we are at the forefront in the development of new products and systems. Wherever our customers are and whatever industry they may be in, they will benefit from our market leading solutions.

» WHAT OTHERS WILL DO TOMORROW, WE ARE ALREADY DOING TODAY «

Ready for New Challenges

Arca IBC, an efficient, economical and hygienic liquid handling container which replaces metal and wooden alternatives.

The Everest pallet is unique. It has an embedded RFID tag, which ensures good traceability throughout its lifetime.

Arca Systems invests in long term development projects. It is here that market requirements meet our technological and application skills. This results in solutions that set new standards.

We have driven the development of the foldable pallet container concept. Several new products have recently been launched, both in Europe and the USA and more are on the way.

The Everest pallet is the product of many years of intensive development work. The result is a winning combination of strong recyclable material, innovative design and efficient new production technology. Everest is the only plastic pallet that meets the requirements for hygiene and strength without additional reinforcement.

For the bulk storage and transportation of fruit and vegetable concentrates, as well as some chemicals, we introduced a new IBC (Intermediate Bulk Container). The IBC is an excellent replacement for traditional packaging in this fast growing industry.

Gemini fulfils the food industry's need for a transport system that does not compromise hygiene standards.

» GLOBAL COVERAGE, LOCAL PRESENCE «

Expanding with our Customers

Arca Systems is continuously expanding across geographical borders, technological boundaries and commercial limits. We are a global company with production and/or sales units in some 30 countries in Europe, North and South America. We have a strongly decentralised organisation, which means that we can stay close to our markets, yet continue our development in global networks. This ensures quick response to customer needs and an efficient exchange of information within the company.

PreLog is manufactured across several highly automated production lines at our factory in Schwerin, Germany.

One of our main strategic production plants is in Nurieux, France.

All our manufacturing facilities are certified in accordance with the ISO 9001 quality assurance system.

Automated production of Everest pallets at our Perstorp factory in Sweden.

Contents

On pages 8-21 you will find examples of different applications of our products. No matter what industry or where in the world, Arca Systems has the right solution for you.

Automotive and Assembly – an important part of our business. **p 8**

Retail distribution in secure, returnable containers. **p 11**

Trays for storage of small parts and components. **p 12**

Containers for efficient mail handling – an Arca speciality. **p 14**

Containers that meet the hygiene demands of the food industry. **p 16**

Storage and distribution of fruit and vegetable concentrates. **p 17**

Returnable systems – from the producer to retail display. **p 18**

Safe handling of delicate fruit and vegetables. **p 20**

Many European bakeries use trays from Arca Systems. **p 21**

The content of this catalogue is divided into two sections. From page 23 to 101 you will find complete information on the full range of our standard products.

P R O D U C T I N F O R M A T I O N

Comprehensive details of the Arca Systems product range begin on page 23.

MATERIAL HANDLING

The Automotive Industry Drives our Development

Our Magnum containers have been used by the world's leading automotive manufacturers for many years. New versions are constantly being developed to meet new requirements. The picture shows a new version with three skids and a label holder.

MATERIAL HANDLING

Products and systems for the automotive industry are an important part of our business. We have developed supply chain solutions for the industry, its suppliers and distributors.

In collaboration with Volkswagen we have developed a new container, which will have a major impact on the industry. It sets a new standard for the distribution of automotive components. It is lighter and has a higher capacity than the traditional version.

The new crates have a
28% higher capacity
with a system weight of 20 kg.

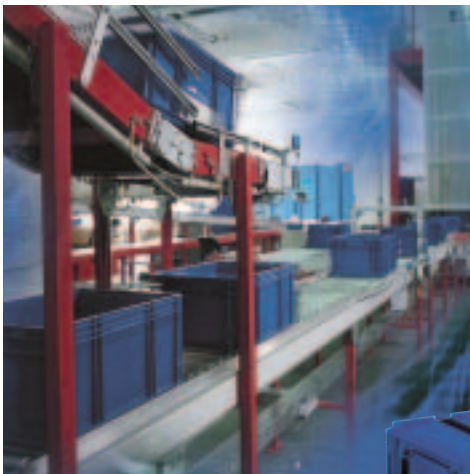

Our new KLT range sets the standard
for the European automotive industry.

Recycled material
from old containers
ready for reuse.

A large quantity of the original units has become redundant. Arca Systems has the answer. We recycle the material from the old containers and reuse it in the production of the new style boxes.

In the USA, Arca Systems sets the benchmark for movement of automotive components with our foldable pallet containers (Magnum and Xytec).

MATERIAL HANDLING

General Motors has, for example, saved millions of dollars through not having to dispose of paper or cardboard single trip packaging. The Magnum is used throughout Europe, in a variety of applications, for the automotive, as well as other industries. Ford Motor Company uses our pallet containers in its advanced European logistics system.

Many automotive companies use components from many countries. An efficient supply chain requires, not only secure parts delivery but also economical return of the empty containers. Our Small Box range has been developed to optimise product flow in automotive plants. Volvo and Scania, amongst others, use these smaller transport units to deliver lighter parts directly to the assembly lines, without taking too much space. The boxes are nested for return shipment which means they take up less space and reduce return transport costs.

Big Box pallet containers are used for handling bulky and heavy items.

Small Box contributes to more efficient component flow.

Galia, another range of containers for automotive parts.

A new 800 x 400 mm Euro Container developed to meet new demands from the automotive industry.

MATERIAL HANDLING

Secure Containers for Retail Distribution

Arca Systems' Integra combines efficient handling with good product security.

We are vastly experienced in providing solutions that meet the complex and varying needs of retail distribution. Our expertise covers many different applications in many different industries. We have a comprehensive range of standard products, but we have also developed customised handling solutions to meet our customers' special needs. These include mail processing, catering, complete systems for the garment industry, pharmaceutical supplies and many others. A combination of efficient handling, care for the environment and product security will reduce loss and damage and save money.

From uneconomical cardboard boxes to secure packaging developed for automated handling systems.

For product information see page 32.

MATERIAL HANDLING

Small Parts Handling made Easy

Arca Systems has Europe's
most comprehensive range
of small parts containers.

Whether or not small machine parts or components are in plastic packs, safe and easy storage is important. System 9000 is Arca Systems' solution. Every part has its place, both in the warehouse or at the work bench. This is a well proven system based on experience

gained across a broad spectrum of industries. We are constantly introducing new products and accessories to meet specific applications. The new 92-series of storage trays is specifically for high volume utilisation.

Modern carousel and storage systems place high demands on the storage modules. We have a wide range of trays and bins for this specific purpose.

MATERIAL HANDLING

Specific Products for the Electronics Industry

The electronics industry demands precision and cleanliness. The ideal solution is to deliver components directly from the supplier to the clean production area, without unpacking. The containers have to be made from approved conductive material.

Arca Systems supplies a range of storage trays and bins in conductive material. Pallets and dollies are also available in antistatic material.

The complexity of electronic componentry increases the need for containers in approved conductive material.

Our antistatic trays and bins are used in many electronic assembly plants.

For product information see page 90.

MATERIAL HANDLING

Modern Mail Handling requires Modern Containers

Postal companies, worldwide, are constantly faced with the challenge of improving mail delivery systems. Electronic sorting equipment places high demands on the containers used in such systems. Arca Systems has, for many years, collaborated with Europe's most innovative postal services to create efficient solutions. As a result we are able to tailor solutions to the specific needs in each country.

Bulky wooden boxes and stillages have been replaced by plastic foldable pallet containers for distributing newspapers and magazines

Swedish postal containers are used in automated mail sorting systems.

A new container, in three sizes, for the French postal service.

MATERIAL HANDLING

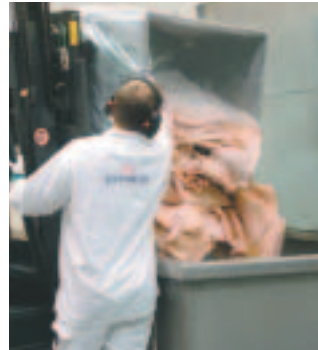

Arca Systems' mail containers are used throughout the world.

LIFE HANDLING

Hygienic and Secure for our Food

Arca Systems' containers are used extensively in the food industry. We have a number of different carrier systems, which satisfy both hygiene and security issues. In response to a growing demand for hygienic foldable pallet containers, we have introduced Gemini. Its smooth internal and external surfaces make it easy to wash and keep clean. The foldability facilitates economical return transport. Big Box is a container mainly used for internal handling. It is a high hygienic pallet container, which is replacing heavy metal containers and stillages.

Pallets that do not compromise hygiene standards are critical in the food industry.

Gemini makes handling and distribution more efficient within the food industry.

Our Big Box range is used in the meat processing industry all over Europe.

Wherever possible, the grocery trade will avoid unhygienic wooden pallets. Arca Systems has developed a range of plastic pallet systems that satisfy hygiene requirements and are also suitable for in store display.

LIFE HANDLING

Arca IBC allows product to be stored outside, for long periods of time, even in a tropical climate.

Hygiene and product integrity have a high priority in the food industry. Arca's IBC is easy to keep clean due to its hygienic design and can be used in factory clean areas.

IBC is equipped with aseptic plastic liner.

The IBC is produced from homogenous food industry approved Polyethylene.

The material is recyclable and replaces fibre based and metal products.

In conjunction with the world's leading food manufacturer, we have developed a totally new concept specifically for the storage and transportation of liquid concentrates. Our new IBCs (Intermediate Bulk Containers) are used to store and transport fruit and vegetable concentrates from producer to processor. We are currently developing many new versions for this rapidly growing market.

LIFE HANDLING

Returnable Systems add Value

We make containers that our customers use over and over again. We then take the containers back, grind them up and make them into new products.

**From the producer to the retailer
without rehandling.**

**Consumers appreciate fresh,
well presented produce.**

In Europe and the USA, there is a growing emphasis on pool systems for the distribution and display of fresh produce.

The containers form part of an advanced cross border logistics chain and are used many thousands of times. RTP (Returnable Transit Packaging) is a concept, which is being applied to a wide variety of applications across a number of industries. Arca Systems is at the forefront of this development and is continually introducing new solutions.

**Containers are easy to clean and
the perforated sides allow good
airflow keeping the content fresh
for longer.**

LIFE HANDLING

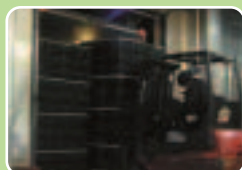

PreLog is a range of foldable crates specifically for fresh produce. Currently 5 million PreLog containers are being used in pool systems in Europe. Growers and other fresh produce suppliers pack directly into the crate. The produce is well protected during transit. Without repacking, the containers are sent to the retail

Returnable systems reduce the amount of packaging waste created. As a result huge cost savings are achieved.

Packing of produce.

Protection during transit.

Display without rehandling.

Tray washing before next trip.

Empty crates are easily folded.

Foldable crates give economic return trips.

outlets for display to the consumer. Empty containers are folded and sent to be washed, ready for the next trip. Melog is another range of foldable crates developed mainly for the American market.

UniLog is also a crate used in large pool systems. It is a foldable container with straight sides and high volume utilisation. It can be used with many other types of container. There is a growing demand for UniLog and several new sizes are currently under development.

Melog is meeting the growing demand for returnable packaging in North and South America.

LIFE HANDLING

Our containers are used
for grape harvesting.
A modern solution
in a traditional setting.

For many years, the food industry
has achieved better efficiency
through its use of our Big Box.

Produce stays fresher for
longer in our containers.

Secure packing
during the harvest.

From field to
attractive retail display
without repacking.

LIFE HANDLING

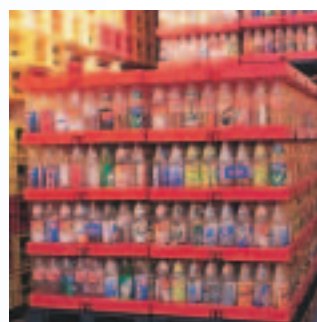

With Big Box in the field, harvesting is made easy.

From harvester to processor.

Bottle trays produce better in store displays and can increase sales by up to 30%. For further information about bottle trays and crates ask for our product brochures.

Bottle trays are easier to handle, improving logistics systems. This is true for both inbound and outbound transit.

Bread has to be fresh. Its packaging is of equal importance to the industry and consumer alike.

Customised Solutions and Identification

ENVIRONMENTALLY FRIENDLY MATERIALS

Our products are made of polyethylene and polypropylene. These polymers are free from additives and are approved for use in the food industry. They are weather resistant and withstand oils and most chemicals. Some of our products are manufactured in expanded polypropylene or polyethylene. These are noise-absorbing materials.

Environmental statements are available on request.

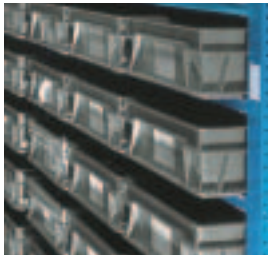

For specific minimum quantities, we can produce containers in any colour or, as pictured, in transparent plastic.

Our products are produced in a wide range of standard colours.

TEMPERATURE TOLERANCE		
Material	Max	Min
PP	80 °C	-25 °C
HDPE	60 °C	-35 °C
The materials can be washed at 90 °C.		

RETURNABLE SYSTEMS AND RECYCLING

Returnable systems are becoming increasingly popular. Using a product over and over again, year after year, results in substantial financial savings and conservation of natural resources. Our products are strong and durable, making them ideal for pool and other returnable systems.

GUARANTEE.

Arca Systems takes complete responsibility for the plastic. When you purchase new products from us, we will help you dispose of the old ones.

RECYCLED MATERIAL

Polyethylene and polypropylene can be used again and again. We have developed production techniques to recycle and reuse these materials in the manufacture of new products. When reuse is no longer feasible, the materials still have value as an energy source. Plastic contains as much energy as, and is far cleaner than, oil. The only by-products are carbon dioxide and water vapour.

We work with authorised partners who grind up the old plastic containers. The material is washed and sent to us for use in the production of new products.

CONDUCTIVE MATERIAL

The basic raw material is polypropylene with carbon black additive. The conductivity of the plastic does not deteriorate over time and leaves no residue. The products are only available in black. As an option, most of our products can be manufactured in conductive material. Please contact us for further information.

Containers can be marked and also equipped with special inserts.

CUSTOMISED DESIGN

Many of our products were developed for specific applications. In some cases this involved modifying existing containers. In others, our R&D team have designed something entirely new.

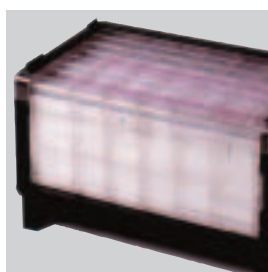

Our containers can be marked using a number of techniques from relief moulding to tampo printing. Different label holders, photo-etched areas for self-adhesive labels, or embedded RF-tags transponders ensure product traceability throughout the supply chain.

Removing the base of one Big Box and welding it to another makes a dual Big Box. It has a huge 1350 litre internal volume.

Flat trays for the chocolate industry. Can be used separately or in containers.

Security box for handling banknotes and coins.

Special courier delivery container with label holder under the lid.

French postal service container with divider and transparent lid.

800 x 600 mm Euro container with special insert.

400 x 300 mm R-KLT container with special insert.

Integra container specifically designed for a global returnable system for spare parts delivery in the shipping industry.

Integra in a pool system for the distribution of medicines and other products for hospitals.

CUSTOMISED SOLUTIONS & IDENTIFICATION

Special label holder for Circuline container.

CUSTOMISED SOLUTIONS & IDENTIFICATION

Photo-etched area for self-adhesive labels.

Well-protected bar code label holder ensures easy reading.

New Euro Container with protected label area and special reflector for automatic routing on conveyors.

Euro Container with divider systems and photo-etched label area.

Integra container in two colours with label holder and hot stamping.

Single colour hot stamping and bar code protection.

New version of the Integra lid has grooves on long and short sides for secure strapping.

Tellus range stack nest containers, strapped on a dolly.

Lid with strapping, R-KLT range.

Integra container manufactured in recycled material.

Hot stamping of container and lid. The lid has photo-etched label area.

Customer specific marking and photo-etched label area.

Hot stamping with customer logo (2-colour).

Screen printing of customer logo (3-colour).

Screen printing of customer logo (4-colour).

Special printing of customer logo.

Tamper-printing of customer logo.

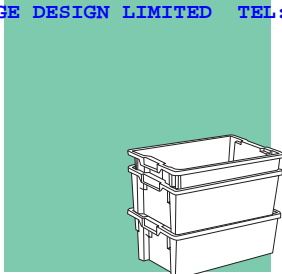

Logo with mould insert.

Serial numbering of containers (Tellus range).

Logo printed in two colours on container in conductive material (ESD).

Stack Nest Containers

Arca Systems offers a comprehensive range of stack nest containers, which save on packaging costs. These containers are suitable for the distribution of goods in a variety of industries. They optimise space utilisation when nested for distribution but take up 70% less space when nested for return or storage. All containers in the range are produced in food approved, recyclable Polypropylene. They are all available with either perforated or solid sides and bases, with capacities from 18 to 87 litres.

Flat or perforated base.

Lids with or without hooks and with grooves for banding.

Label areas on both the short and long sides.

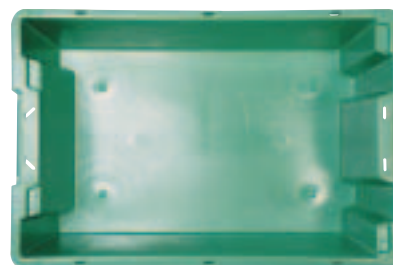

Lids with room for security tags on all sides.

Perforated long sides and solid base.

Perforated long sides and base optional.

The unique construction of the container ensures maximum volume utilisation.

ARCA TELLUS – THE POPULAR VOLUME SAVER

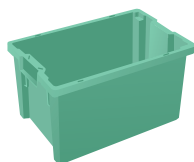

For many years, Tellus has been a popular choice in Europe. It has a spacious interior and smooth sides. With a flat base it is ideal for quiet, safe travel on conveyors. The hand grip design ensures easy and comfortable manual handling.

All containers can be fitted with label holders or code strips for automatic routing. Several versions of lid are available including a foldable lid, which can be placed inside the box for nesting.

STACK NEST CONTAINERS

**INTEGRA® – THE IDEAL ATTACHED LID
RETURNABLE CONTAINER**

Secure when stacked or nested.
Nested containers
save valuable space.

**INTEGRA IS THE COMPLETE RETURNABLE
PACKAGING SOLUTION**

It incorporates several design features, which dramatically improve productivity and reduce distribution costs in retail, wholesale and industrial applications. It is designed for both automated and manual handling. The “step” design enables nearly vertical walls. This maximises volume and load capacity and saves space during transportation. Lids are equipped with ribs, which hold stacked containers securely. When nested, Integras take up 65% less space.

Label areas for bar code labels and photo etched surfaces for self adhesive labels.

The security seals assure the contents (art. **1325.830**).

New lid accepts strapping on long or short side.

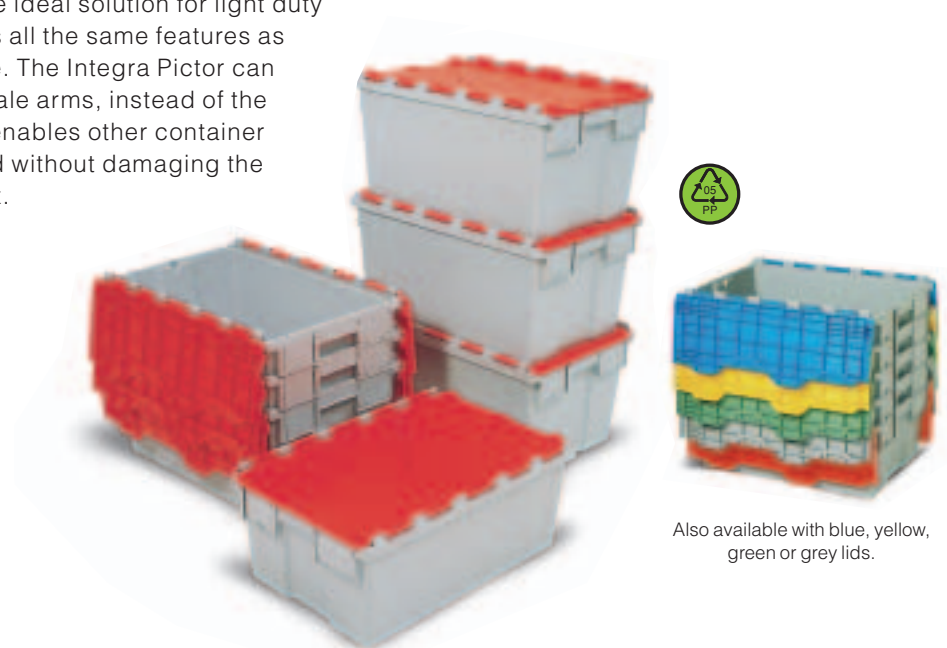

The label is protected by an integrated recessed label holder.

To eliminate pile ups, Integra has bumpers on both short sides. The base has a special surface for greater security in different transport systems.

INTEGRA PICTOR

Integra Pictor is the ideal solution for light duty applications. It has all the same features as the standard range. The Integra Pictor can be supplied with bale arms, instead of the attached lid. This enables other container sizes to be stacked without damaging the contents of the box.

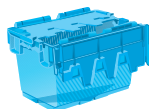

Also available with blue, yellow, green or grey lids.

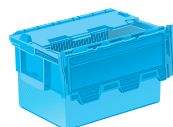

STACK NEST CONTAINERS

ARCA INTEGRA®

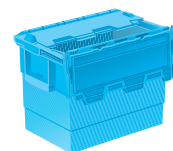

Material: Polypropylene.
Attached lid. Suitable for
strapping and/or sealing.

ARCA LEO – DOUBLE BASE CONTAINER FOR HIGH BAY STORAGE SYSTEMS

Production and storage systems are becoming increasingly sophisticated. Arca Leo has been specifically developed for high bay and automated storage and retrieval systems. Its unique double base construction gives Leo incredible strength and ensures a maximum deflection of

only 5 mm, even when loaded to a capacity of 40 kg. The boxes have vertical sides, which ensures good space utilisation. When empty the boxes can be nested, giving a space saving of at least 50%.

Double base gives extra strength and smooth running on conveyors.

Generous label spaces on all sides and base.

Compatible with Euro and KLT containers.

Also available in conductive material.

BOXES FOR MAIL HANDLING

Arca Systems has developed containers for postal services around the world. Many of these products are equally applicable to other general applications. These containers can be stacked and nested and can be supplied with lids, if required. As they were originally designed for automated handling, holders for bar code labels or other coding methods are standard.

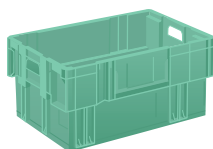

For further details on Arca Leo, ask for our product brochure.

Nestable Containers

ARCA LIBRA – DESIGNED FOR PALLET HANDLING

Originally developed for the toy manufacturer LEGO, Arca Libra containers have a new design that provides optimum internal volume. When empty, the containers are nestable, saving at least 50% space. All sizes in the range have a special reinforced base, which minimises deflection, ideal for automated handling. Label and marking areas are provided on all sides. Identical base sizes, on all versions, mean these containers are ideal for palletising.

SMALL BOX – REPLACES ONE WAY PACKAGING

Returnable plastic containers replace single trip packaging in many applications. This is particularly true in the automotive and assembly industries where component flow between suppliers and assembly plants is greatly simplified. They are nestable, when empty, saving up to 70% space, which significantly reduces return transport costs. A smooth, clean design ensures maximum internal storage space and photo etched label areas complete the package.

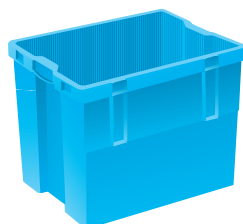

The containers save up to 70% volume when nested.

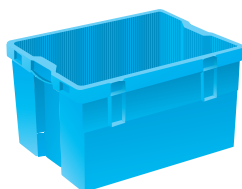

The containers **4565** and **4565** have a capacity of up to 50 kg and are produced in expanded Polypropylene, a noise absorbing material.

**ARCA
LIBRA™**

Stackable Containers

Arca Systems supplies a huge range of stackable containers, covering a variety of applications.

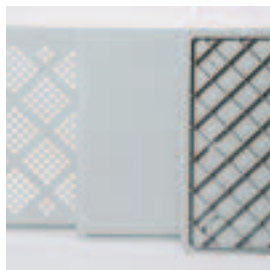

EURO CONTAINERS FOR LOGISTICAL EFFICIENCY

Our Euro Containers offer many opportunities for efficient materials handling. The multitude of sizes and designs means they can be tailored to the flow of goods in most types of organizations.

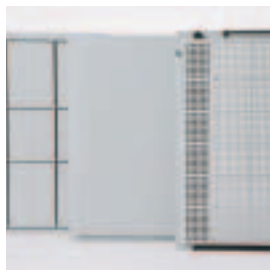

The container's design gives stability in transport, while the straight sides and modular sizes simplify stacking and storage.

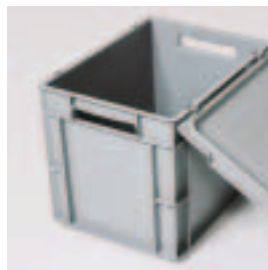

Modular sizes ensure optimum pallet utilisation. Use two of the largest containers, 32 of the smallest or many combinations of different sizes on the same pallet.

Perforated, solid or ribbed base. (87-series)

Ribbed, solid or perforated base. (64-series)

Hinged lid in two sizes. (87-series)

Hinged lid and lid with holes for security seals.

NEW 800 X 400 MM EURO CONTAINER

Our range has been enhanced with the addition of a new Euro Container, characterised by its exceptionally large internal volume, but low weight. Manufactured in polypropylene, the containers have a modular size of 800 x 400 mm. Various different methods of tracking are possible, including label holders for Odette labels on the short sides and photo etched areas for self adhesive labels on the long sides.

Label holder for Odette labels.

New Euro Container series has a reinforced base for automated handling.

Euro Container with sliding panel for easy order picking.
Standard version with ribbed base.

Customer specific solution with reinforced base for high bay storage.

STACKABLE CONTAINERS

EURO 2000 – PERFECT FOR AUTOMATED HANDLING

These new containers have a flat base, comfortable hand grips and withstand heavy loads. They are ideal for automated handling. Integrated label holders are provided on two sides, in accordance with Odette standards. A protective lid, measuring 1200 x 800 mm, is also available.

Our new generation of Euro Containers assures a long lifetime in returnable systems, combining high strength with smooth transport on roller conveyors and easy handling in high-bay storage systems.

UNIBOX – FOR HIGH HYGIENE DEMANDS

In many applications, product integrity and hygiene are of equal importance. Uniboxes are produced in food industry approved HD-polyethylene.

The smooth internal surfaces, rounded corners and drain holes in the rim make these boxes exceptionally easy to clean. They also have a flat base for smooth running on conveyors. As an option, some sizes are available with perforated sides, which ensure good air flow around the contents.

STACKABLE CONTAINERS

R-KLT RANGE FOR EFFICIENT COMPONENT FLOW

Our new R-KLT containers are designed to satisfy the high demands imposed by automated logistics and materials handling systems. Available in five sizes, with optional lids, these containers are considerably lighter and have a higher volume capacity than previous KLT containers. A system weight of 20 kg ensures efficient material flow. Each container conforms to the quality standards of the European automotive industry. As an option the containers can also be manufactured in conductive material.

KLT in foldable version, folded height 79 mm.

Label holder for Odette labels on long and short sides.

Indented rim for self adhesive label application.

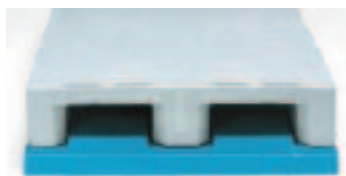

**GALIA – DEVELOPED FOR AUTOMATED HANDLING**

Logistics and distribution systems vary from one country to another. Galia was specifically introduced to meet the needs of the French automotive industry.

The containers are designed with a generous internal volume to maximise load carrying and have large areas for labelling, etching or coding on both long and short sides. Lids, which snap tight to provide a dust free interior, are available for all sizes.

SAFE AND SECURE TRANSPORTATION

Pallet covers are available in two sizes, 1200 x 800 and 1200 x 1000 mm. They fit over the contents of a pallet to create a secure unit for either storage or distribution. The covers can be etched or marked with, for example, a company logo.

The covers fit our range of plastic pallets. They can also be used with wooden pallets, manufactured to DIN15141.

Raised safety corners for stable stacking. Both versions available with integral straps.

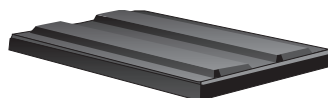

**COVERS**

1200 x 800 mm.

1200 x 1000 mm.

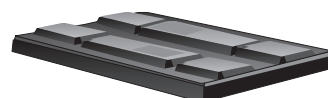

Material: Polypropylene.

Small Foldable Crates

FOLDABLE CONTAINERS REDUCE TRANSPORT COSTS

Eliminating the time and money spent on repacking and reloading is a major advantage to the distribution industry. Arca Systems supplies a complete range of foldable crates to the grocery trade, as well as other applications.

ARCA PRELOG – ECONOMICAL AND HYGIENIC

The design and construction of our PreLog makes it Europe's leading returnable container. The result is an efficient, hygienic distribution tool for either manual or automated handling. PreLog has a minimum of recesses outside and inside, making it easy to wash and keep clean. Smooth walls and base protect the contents, whilst perforated sides ensure good air flow to promote produce freshness. The upper rim is manufactured by using gas-assisted injection moulding. This gives a rigid container with the lowest possible weight.

Ortus' height measurements are complimentary to our PreLog and UniLog crates.

80% space saving when empty and folded.

Large holder for temporary labelling. Space for permanent marking with company logo.

ARCA ORTUS – FROM PRODUCER TO RETAILER

Our Ortus range meets the supply chain demands for the distribution of fresh fruits and vegetables as well as other grocery products. The containers are very robust and are easy to keep clean.

ARCA UNILOG

The UniLog range is based on the PreLog concept. It has a similar design and construction and is also used in large pool systems. UniLog is equipped with folding bale arms, which make it compatible with other types of container and packaging. When empty, the bale arms fold into the side of the container for ease of nesting or folding.

Bale arms fit perfectly into the side wall.

Bale arms folded out for stacking.

UniLog is compatible with other packaging. Pictured here with our bale arm container **7210.000** (see page 37).

Dollies

EASY HANDLING

Our dollies are designed to facilitate the safe and easy movement of crate stacks. We have a wide range of dollies with a variety of base versions, to suit the varying dimension of our containers. All our dollies are lightweight, hygienic and are suitable for use in cold stores and freezers. They are available in a range of materials, with different wheels and castors to suit many applications.

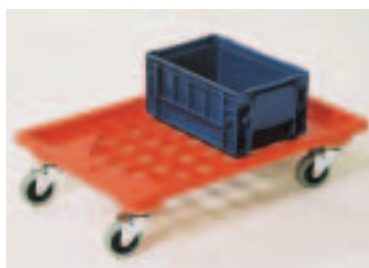

New dolly fits containers 800 x 400 mm.

Dolly for 800 x 600 mm containers.

The **2800.500** dolly fits both stackable and stack nest containers. External dimensions 612 x 412 mm.

The dolly is also available with grid for transport of small units.

The dolly is designed to fit both stackable and stack nest containers. External dimensions 600 x 400 mm.

system 9000

SMALL PARTS HANDLING MADE EASY

System 9000™ is a complete storage system for efficient small parts handling in industry and trade. Based on a wide range of durable bins and storage trays, System 9000 provides outstanding versatility.

The design of our bins and trays assures easy identification of and access to the contents, as well as full utilization of space. They are ideal for all kinds of shelf and paternoster systems. Together with specially designed shelf racks, panels and trolleys, System 9000 offers a flexible storage system that is infinitely adaptable to suit the need of any business.

New storage trays come in two depths, 500 and 600 mm. New design provides maximum utilisation of carrier depth. Also available in antistatic material.

NEW GENERATION OF STORAGE TRAYS FOR OPTIMUM CUBE UTILISATION

Our new 92 series storage trays are the ideal solution for obtaining maximum space utilisation in shelving and carousel systems. With a height of 62 mm, it is possible to store more in the same space.

A patented base design ensures that the tray is rigid with minimal deflection. The shape of the front section eliminates the potential for the tray to slide forward within the carrier system.

Easy mounting divider system with pockets for labels.

Self adhesive labels can be applied to the top of the dividers.

STORAGE AND MODULAR BINS

Our storage and modular bins have a smooth profile, giving a 20% improvement in space utilisation – there is no wasted space between bins. The base is completely smooth making the containers ideal for use on shelves, paternosters and roller conveyors.

STORAGE TRAYS

Storage trays are available in three different heights making them excellent space-savers for handling small parts. They are perfect for use in shelf and paternoster systems. Fitted with labels and dividers, these trays can be easily adapted to any storage requirement.

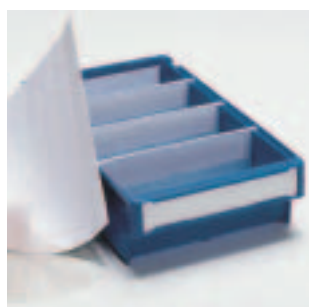

Length and width way dividers.

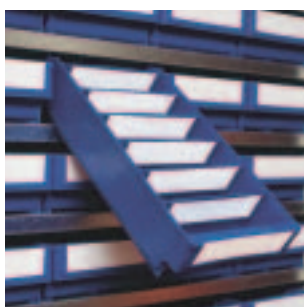

Storage and modular bins with transparent front flaps.

Simple yet secure fastening to panels and mounting rails.

Labels for identification on tray fronts and dividers.

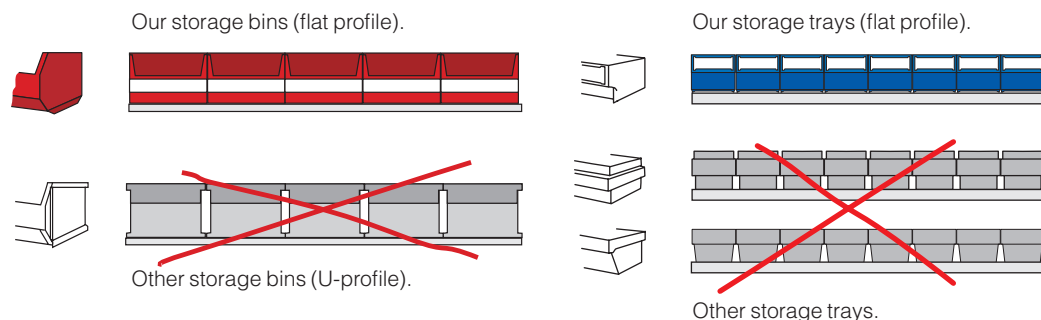

The shelf supports the back edge of the tray for easier picking.

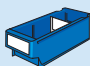

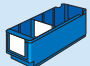

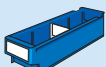

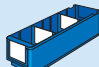

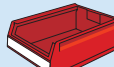

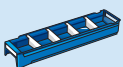

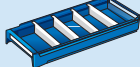

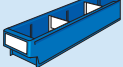

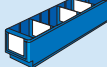

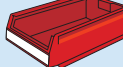

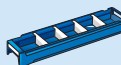

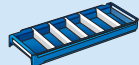

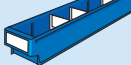

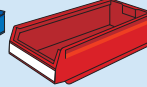

Several sizes available in conductive material.

SYSTEM 9000**UNRIVALLED SPACE UTILISATION**

Our storage bins and trays have a flat side profile, leaving no gaps between them. This gives 20% better space utilisation than other designs.

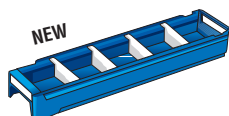

**LARGEST RANGE**

We offer the most comprehensive range of storage bins and trays. Standard depths from 300 to 600 mm are available.

SYSTEM 9000**SYSTEM 9000 – EASY TO CONSTRUCT
AND PRACTICAL TO USE**

Assembly system 9000 is a flexible storage system using a standard 900 mm shelf length. Together with shelves, panels, rails and trolleys, the system is suitable for single or double-sided assembly and makes a tailored storage unit easy to develop. All components are movable and can be adapted to meet new demands. A standard range of cabinets is available with the requisite number of bins to form a complete storage unit. All cabinets are made of steel plate and painted grey.

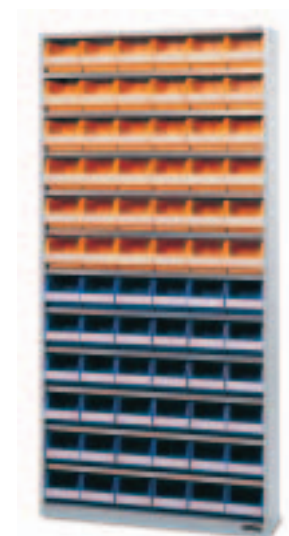

Bin cabinet **9008.832** with 92-series storage trays.
Size 2000 x 980 x 500 mm.

Bin cabinet **9007.831** with 91-series storage trays.
Size 2000 x 980 x 400 mm.
Also available in depth 500 mm, optional.

Bin cabinet **9007.830** with modular bins.
Size 2000 x 980 x 400 mm.
Also available in depth 500 mm, optional.

Bin cabinet **9006.830** with storage bins.
Size 2000 x 950 x 250 mm.

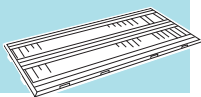

Bin cabinet **9041.831**, height 1000 mm
with storage trays and modular bins.

Floor rack 1500 or 2000 mm high.
Single or double-sided mounting rails.

Transport trolley, height 1625 mm
with wall panels.

floorslats

A GOOD SURFACE IS IMPORTANT

Our floor slats have a specially designed cushioned profile. This reduces the strain placed on the back and legs from constant standing. The slats can be combined and interlocked as you choose. Ramps and corners, for dolly and trolley traffic, are available.

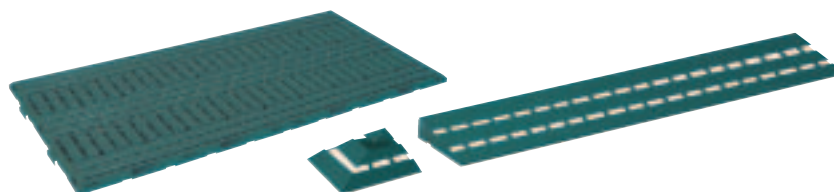

The slats withstand most chemicals, oils and weak acids and are suitable to use in temperatures between -10 and +80 °C.

FLOORSLATS

Material: LD-Polyethylene.

Simple and secure interlocks for large areas. Ramps and corners allow trolley traffic.

Large Foldable Containers

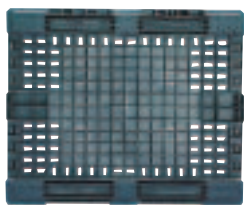

MAGNUM – A SOUND INVESTMENT

Our Magnum range is the complete returnable packaging system, which offers many advantages over conventional pallets, stillages, cartons and collars. Magnum containers are used in a variety of industries, which place high demands on the distribution packaging. Their use gives significant cost savings over one trip alternatives.

The low tare weight makes it easy to manoeuvre and it is extremely quiet to use. When empty, it folds to around one third of its erected size, saving valuable space in storage or return transport. Magnum is made from expanded HDPE and is 100% recyclable.

Magnum is easy to fold and erect. Each side is numbered in the sequence they fold. Folded height of 406 mm.

Perforated base is standard, but Magnum can also be supplied with a solid base.

Standard version has two skids. Optional with three skids.

The base and feet are designed to automatically centre the Magnum when stacked. This gives good stability, with or without the lid.

Large areas for stamping or engraving.

Can be sequentially numbered.

Available with different labelling options. E.g. holder for Odette labels.

MANY DIFFERENT SIZES AND VERSIONS

The Magnum range is constantly growing due to demand from other industries.

It is a far superior distribution container to all other forms of packaging.

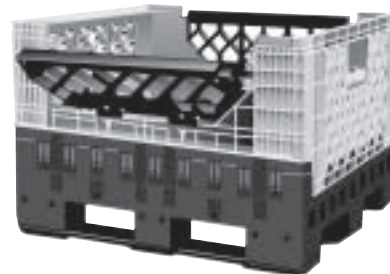

2330.410 1200 x 800 x 950 mm
2320.410 1200 x 1000 x 975 mm

ARCA FLATPAC – THE LIGHTWEIGHT OPTION

As an alternative to our standard Magnum returnable systems, FlatPac is the perfect solution for transporting components and items, where the weight does not exceed 250 kg. Its unique design consists of a robust pallet and lid and a heavy-duty plastic sleeve with integral base plate, which is attached to the sleeve. FlatPac can be easily erected and disassembled by one person. When empty the sleeve assembly concertinas and fits neatly onto the base. The lid is then attached to provide a compact unit, which saves valuable space during return transport. Drain holes in the feet area mean that FlatPac is suitable for outside storage. Several versions of this unique container are available. Please contact us for further information.

The integral base plate with Velcro fasteners is easy and convenient. The lid is foldable.

Empty containers can be stored safely outside.
Folded height 210 mm.

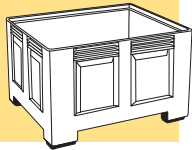

Easy handling with three individual components.
Two hand grips on the cover.

Optimum use of space
during transportation
and return of empties.

Big Box Pallet Container

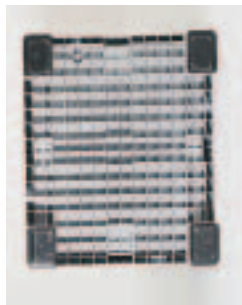

BIG BOX – HYGIENIC AND STABLE

Our Big Box is a robust packaging system, which can be used again and again. Straight, smooth double-skinned walls give it a large internal volume. Big Box is designed with rounded rims and corners, which means that it is easy to keep clean. Accessories include access doors, castor wheels, skids and lids as well as drain plugs and taps. Perforated sides and base can also be specified.

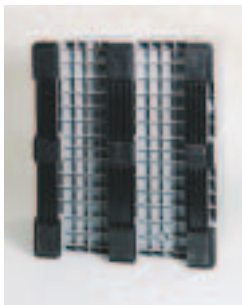

Other models in the Big Box range are specifically designed for handling fruit, vegetables and other fresh produce. All models have the option of two or three skids or feet.

In addition to a choice of size, Big Box is also available with solid or perforated sides and base. Spacious openings for fork trucks on all four sides. Large marking areas.

Big Box is available with four feet or three skids (2 skids as an option).

Sealable lid. Smooth, water repellent design, with optional strapping.

Drain taps and plugs for 1" and 2" openings.

Bag-in-Box Intermediate Bulk Container

ARCA IBC – A COST EFFECTIVE, HYGIENIC AND SAFE LIQUID HANDLING SYSTEM

Arca Bag-in-box IBC is a totally new concept. It is the result of a development project in cooperation with global food and beverage companies who handle large volumes of liquid product.

The concept is based on large foldable containers with flexible liner bags. The liner bag is placed inside the IBC and filled with the liquid. This results in a packaging system, which:

- Dramatically reduces packaging costs, compared to traditional alternatives.
- Simplifies handling throughout the logistics process.
- Reduces the use of packaging material – the Arca IBC is returnable and reusable.
- Provides hygienic, safe transportation and storage of liquid products.
- Is returnable, reusable and – by the end of its useful life – totally recyclable.

The Arca IBC can be stacked up to five high, when filled.

The BD versions accept liner bags with bottom discharge valves.

Arca IBC is manufactured using the latest techniques in plastic science, to give a product with exceptional strength and durability. All of the important components are welded together in a sandwich design. This results in smooth, flat surfaces everywhere, together with good stacking and loading capacity. When filled, Arca IBC's can be stacked five high, and stored for long periods. The strong welded construction means the IBC can be used in all kinds of transportation networks – truck, rail, sea container, break bulk ships – due to its ability to absorb the movement of liquid. The lid is locked to the sides with strong locking handles, which can also be sealed. All pallet bases have four-way entry to make forklift handling easy.

The Arca IBC can be ordered with a variety of accessories.

A folded IBC minimises the cost of return freight.

Flat, smooth surfaces are the trademarks of the Arca IBC.

A level indicator tells the user when the contents is getting low.

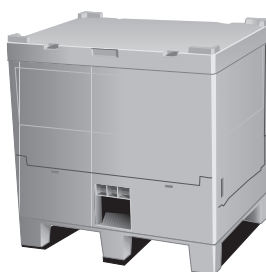

Tamper evident seals are available.

Liner bags, valves and fittings – an important part of the Arca IBC concept.

ARCA IBC™

Material: Polypropylene.
Folded height:
383 mm (CF 65),
450 mm (CF 285).

Pallets

EVEREST – THE UNIQUE PLASTIC PALLET

The grocery industry has long been dissatisfied with today's conventional pallets. Wooden pallets can cause damage to the goods, which are then rejected. Repair costs of the wooden units can also be high. Wooden pallets also fail to meet the hygiene demands of the grocery trade.

Our new Everest pallet is the product of five years of intensive development work. The result is a winning combination of strong recyclable material, innovative design and efficient new production technology.

Everest has all the features you could hope for in a modern pallet and more besides. Not just a functional load carrier, it can also carry information about the load and its history. RF-ID has become reality. Two integrated computer chips can be imbedded in the pallet for checking the entire transport flow. Everest meets high loading specifications without having any metal reinforcement and is 100% recyclable. It is the same height as a conventional pallet making it compatible with existing pallet systems. Everest meets ISO 8611 standard.

Everest meets high loading specifications without having any metal reinforcements and is 100% recyclable.

THE MODERN LOAD CARRIER

Everest is robust and easy to clean. Its tare weight is constant and it is suitable for all lifting systems. It is weather resistant and fully recyclable. There are many methods of marking and identification. Two RF-tags can be built into the Everest pallet, enabling it to carry much more information about the goods than conventional bar codes.

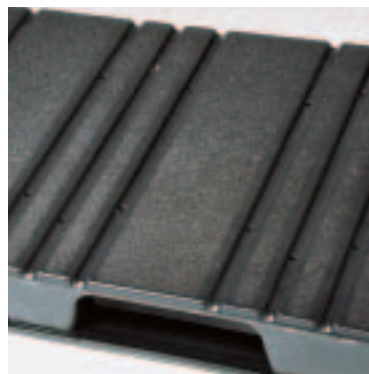

Imbedded RF-tags in the skids assure traceability.

The pallet can be coated to give a better friction grip than wood, even at -30°C .

A lightweight, smooth and hygienic design, with no sharp edges, results in a safer pallet for operators.

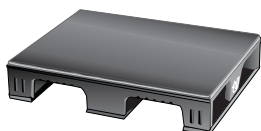

The pallet can be made with a profiled surface for the beverage industry.

ARCA EVEREST™

Material HD-Polyethylene

PALLETS

PLASTIC PALLETS – THE SOLUTION FOR CLEAN, HYGIENIC ENVIRONMENTS

Our plastic pallets are designed to meet the required standards for clean and safe produce handling. The pallets are tested in accordance with relevant international legislation and are manufactured from food-approved, UV-stabilised HD-Polyethylene. They are strong and have a low tare weight, which remains constant. Smooth seamless top surfaces and undersides ensure there are no bug traps.

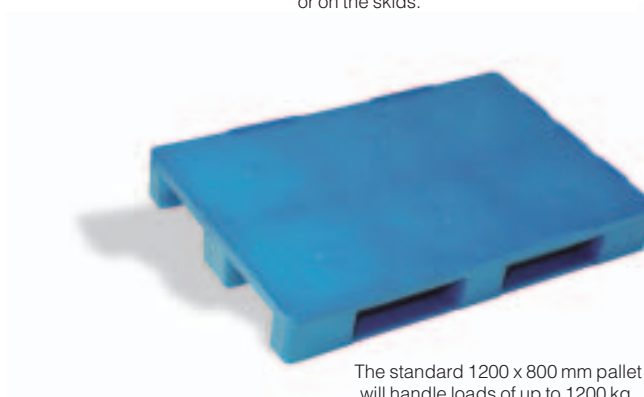

The 1200 x 800 mm pallets are also available with stronger skids to withstand heavy-duty mechanical handling.

Smooth top surfaces and undersides make the pallets easy to clean.
Secure and simple stacking of empty pallets.

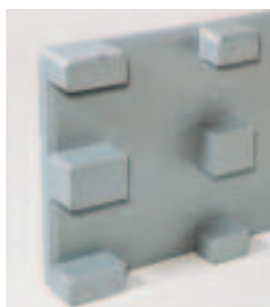

Optional anti-slip pads.
They can be placed on the pallet deck
or on the skids.

The standard 1200 x 800 mm pallet
will handle loads of up to 1200 kg.

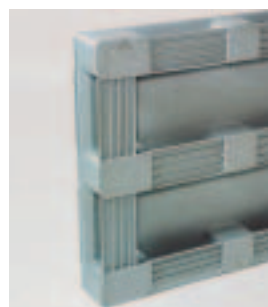

The 1200 x 1000 mm pallet
has a capacity of 1500 kg.

1200 x 800 mm pallet
with feet, **6461.833**.

1200 x 800 mm pallet
with stronger skids.

Standard version with five skids
for the 1200 x 1000 mm pallet.

H1 version meets German
standards, **6461.837**.

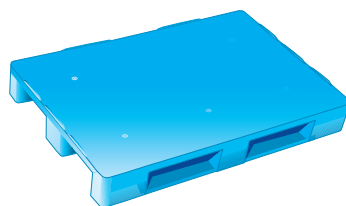

HYGIENIC PALLETES

PALLETS

NESTABLE LIGHTWEIGHT PALLETS

Plastic pallets replace disposable wooden ones. Our lightweight plastic pallets are suitable for product handling throughout the supply chain. Their unique nestability, both with feet and skids, results in a 60% space saving for storage or during return transportation. They are made from recycled HD-Polyethylene and are suitable for all lifting systems. The pallets are easy to handle with forklift trucks and can also be used on roller conveyors or in pallet racking.

Nestable pallet with skids, 600 x 400 mm.

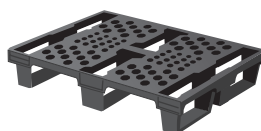

Nestable pallet with feet, 1200 x 1000 mm.

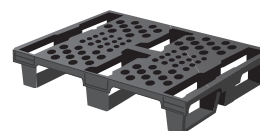

Nestable pallet with feet, 1200 x 800 mm.

EURO PALLETS FOR TRADE AND INDUSTRY

The use of plastic pallets offers many advantages. They are durable and easy to handle, simple to clean and maintain a constant low tare weight. The pallets are UV and weather resistant. They meet or exceed all relevant international standards and are suitable for use in any lifting system. The pallets are available with either smooth solid or perforated surfaces, with skids or feet and with or without raised edges to prevent goods shifting.

Hygienic design
with welded skids, **2705.500**.

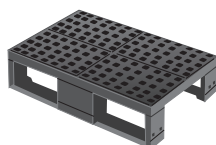

Half and quarter size pallets
are designed for use throughout
the supply chain – from producer to
in-store display. They are made of
recycled HD-Polyethylene.

Containers for Hazardous Waste Handling

CONTAINERS FOR HANDLING HAZARDOUS WASTE AND RECYCLABLE PRODUCTS

In the modern world, many dangerous and hazardous products have to be transported to waste disposal sites or recycling centres. We have a variety of products, which are approved by authorities in most countries for these specific purposes.

Our Big Box and Magnum pallet containers are strong, durable containers, which can be specially sealed to avoid contamination or leakage. Hazards such as used car batteries, fluorescent tubes, redundant PCs, empty paint tins and other chemical containers can be safely transported. Please contact us to discuss a specific application.

Magnum 1600 x 1200 x 975 mm for handling and transport of worn-out fluorescent tubes.

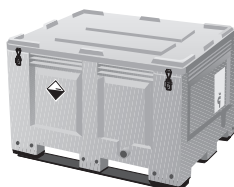

Big Box is an ideal solution for storage and transport of car batteries.

Our Magnum containers are suitable for handling various environmentally hazardous goods.

Products for the Electronic Industry

The advances in miniaturisation and complexity of electronic circuitry have increased the need for containers and trays made of approved conductive material. The conductivity values of the containers do not degrade with time and the material leaves no residues.

Special Products for Produce Handling

FOOD INDUSTRY

Arca Systems is well aware of the special requirements imposed upon load carriers by the food industry. We supply a wide variety of containers, designed to ensure product integrity, during storage or shipment, and which are extremely easy to wash and keep clean.

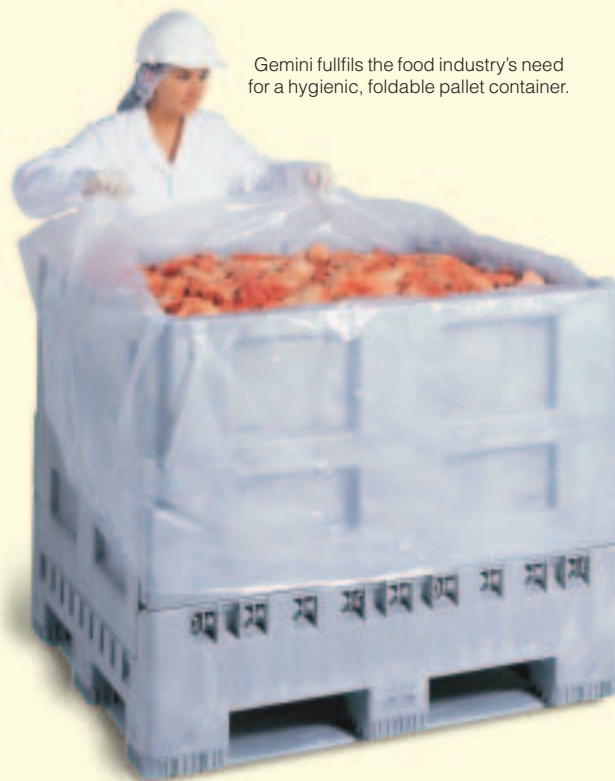

Our Big Box containers are used extensively in abattoirs and meat processing factories for moving product around the plant in bulk.

Big Box is the hygienic replacement to heavy metal containers and stillages in the meat processing industry.

The food processing industry demands both hygienic pallets and containers. Pictured our hygienic pallet with Uni Boxes.

Gemini fulfills the food industry's need for a hygienic, foldable pallet container.

Gemini is a special hygienic version of our foldable pallet container – Magnum. It is specifically designed for the distribution of foodstuffs in the produce industry, whilst still reaping the benefits of returnable packaging.

Arca Systems has an extensive range of plastic pallets and returnable containers. All are manufactured in food industry approved materials and are easy to keep clean.

We have also developed a special IBC, a totally new concept for the storage and transportation of fruit and vegetable concentrates.

Euro Containers are available in different sizes and versions.
For hygienic pallets see pages 82, 83.

Solid containers in white. As an option the containers can also be manufactured in HD-Polyethylene.

Subject to minimum quantities most of our containers can be delivered in transparent versions.

Standard container for Norwegian meat industry.

Perforated stack nest container
7936.000. Suitable for handling poultry.

New Euro Container 800 x 400 mm.
For dollies see pages 58 and 59.

The construction of the container makes it suitable for deep frozen products.

Stack nest containers in four different heights.

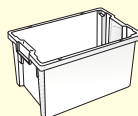

A strong and stable container, 600 x 400 mm, with a large inner volume. Lid also available.

AGRICULTURE

Maintaining the freshness and quality of fresh fruit and vegetables puts high demands on packaging. Throughout the fruit and vegetable growing regions of Europe, Arca Systems' products are well known.

Perforated versions of our Big Box provide an efficient container for collecting harvested produce. The same container is then used to ship directly to the further processing industry, without the need to rehandle the produce.

Returnable foldable crates, such as Arca PreLog, are used to deliver fresh fruit and vegetables directly to the retailer.

From harvest in the field directly to the processing industry with Big Box pallet container.

Various containers for handling soft fruit and vegetables.

Special customised containers for harvest and transport of grapes to wine producers.

Small foldable crates for pooling systems, from the producer to attractive shop display.

BREAD

BREAD

The baking industry was one of the first manufacturing sectors to recognise the potential benefits of using returnable plastic crates to deliver its goods. Since the introduction of the concept, Arca Systems has worked closely with Bakers, throughout Europe to give them the products they require. The variety of bread, available across the continent has led to the development of many tailor made containers. These include baguette holders in France, special trays for delicate pastries and chocolates, as well as a variety of containers for rolls and loaves. The most important factor is to ensure that freshness and quality is maintained.

Bread has to be fresh
and well-designed bread crates
are of great importance to the industry
and consumer alike.

Container for transport of baguettes.

Lightweight containers for pastries.

external: 600 x 400 x 150 mm
internal: 560 x 360 x 138 mm
weight: 1.1 kg
volume: 27 l
pallet unit: 64 pcs

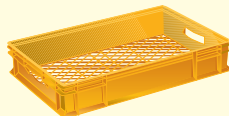

6478.750 perforated base
external: 600 x 400 x 280 mm
internal: 555 x 355 x 270 mm
weight: 2.1 kg
volume: 55 l
pallet unit: 32 pcs

3640.720 perforated base
external: 600 x 400 x 410 mm
internal: 555 x 355 x 400 mm
weight: 2.9 kg
volume: 80 l
pallet unit: 20 pcs

SPECIAL SIZES

Material: HD-Polyethylene.

7940.750 perforated base
external: 628 x 418 x 117 mm
internal: 590 x 380 x 105 mm
weight: 1.5 kg
volume: 23 l
pallet unit: 80 pcs

5781.750 perforated base
external: 600 x 500 x 142 mm
internal: 560 x 470 x 120 mm
weight: 1.7 kg
volume: 27 l
pallet unit: 60 pcs

2405.500 perforated base
external: 661 x 465 x 830 mm
internal: 625 x 425 x 766 mm
weight: 5.4 kg
volume: 180 l
pallet unit: 28 pcs
