Stackable Containers

Schoeller Arca Systems offer a comprehensive range of stackable containers in many sizes, covering a variety of applications. Examples are the Automotive Industry, the Pharmaceuti-

cal Industry and companies with automated storage systems. They are available both perforated and solid with capacities from 3 to 165 litres.

EUROCONTAINERS™

Our broad range of Euro containers offer many opportunities for efficient materials handling. The multitude of sizes and designs means that they can be tailored to the flow of goods in most situations. The design of the containers gives stability in transport, while their straight sides and modular sizes simplify stacking and storage.

THERE ARE 3 BASIC TYPES: 87, 23 AND 64

87 Serie - Closed handholes, material PP, smooth bottom for conveyors, integrated labelholders, opening for sealing, max load 15kg

23 Serie - Open handholes, material PE, opening for sealing, max load 25 kg

64 Serie - Open handholes, material PP, max load 25 kg

Pls. contact us for more details.

MINI LOAD CONTAINER and EUROCONTAINER with access door

Together with one of the leading companies within automated storage systems, Schoeller Arca Systems has developed a new mini load container. The container is designed to be used in automatic storage systems for efficient picking with a sliding door making the content visible to the operator as well as making picking easier. The dimensions of 600 x 330 mm and a height of 210 mm are specifically suited for pharmaceutical products and we expect the container to become a reference within the industry.

VDA-R/RL/F-KLT CONTAINERS

Our R/RL-KLT containers are designed to satisfy the high demands imposed by automated logistics and materials handling systems. Available in five sizes, with optional lids, these containers are considerably lighter and have a higher volume capacity than previous KLT containers. Each container conforms to the quality standards of the VDA specific requirements (details on request). As an option the containers can also be manufactured in conductive material.

GALIA CONTAINERS

Logistics and distribution systems vary from one country to another. Galia was specifically introduced to meet the needs of the French automotive industry.

The containers are designed with a generous internal volume to maximize load carrying and have large areas for labelling, on both long and short sides. Lids, which snap tight to provide a dust free interior, are available for all sizes. Each container has its unique colour to distinguish the size.
