

Colours within the standard range and painted products within this brochure are finished in a hard wearing anti-bacterial powder coating, where indicated. Premiershield contains **active silver ions** that penetrate the bacteria cell walls inhibiting bacterial growth. It is effective against both gram negative and gram positive bacteria.

Premiershield is effective for the life of the coating and it is recommended as an aid to good hygiene practices, not as a replacement. Products coated in Premiershield are ideal for all sectors where humans come into direct contact with the product and especially in those difficult to clean areas. Examples include health, education, public buildings, factories, workshops, laboratories & offices etc.

INDEPENDENT TESTS REVEALED THE FOLLOWING

Bacteria Tested	% CFU Reduction
Staphylococcus Aureus (MRSA)	99.99
Escherichia Coli (E-Coli)	99.99
Pseudomonas Aeruginosa	99.99
