Storage Lockers

- ▶ Anti-Bacterial Powder Coating
- ▶ Robust Construction
- ▶ Welded Frame Design
- ▶ Lock Options
- ▶ Metric Sized Lockers
- ▶ Sloping Top Option

These coloured lockers are manufactured to the highest specification.

Lockers are welded and riveted in construction. Semi concealed hinges are welded to the door and riveted to the frame, allowing easy replacement of doors. Doors positioned within a rebated frame to enhance compartment security. The carcass incorporates nesting holes on all sides and a return flange at the base for extra strength and to reduce floor damage. Lockers are manufactured using cold rolled steel. Material thickness specification 0.9mm doors and frame, 0.7mm carcass and shelves. Components are polyester powder coated prior to assembly to ensure all surfaces are protected.

UK manufactured products.

elite GUARD

Anti-Bacterial Powder Coating

An effective secondary support to existing cleaning practices

elite GUARD - Anti-bacterial powder coating an effective solution to fight against bacterial contamination for the life of the coating. Independently tested and found to be 99.9% effective against MRSA and E.coli. Also shown to exhibit zero growth for fungi and moulds.

elite GUARD offers the healthcare, food and those users requiring stringent hygienic environments an effective secondary support to existing cleaning practices in the fight against bacterial contamination.

PPE Lockers

elite GUARD
Anti-Bacterial Powder Coating

Specification:

Manufactured using high quality mild steel in a range of 0.9mm (20swg) - 1.5mm (16swg) thickness to give a robust unit. Each unit is assembled from pre-formed steel and welded together for extra rigidity. Doors are reinforced with steel door stiffeners. Integral leakproof welded base sump. Welded seams will also assist in maintaining the structural integrity under extreme conditions. Sloping tops and stands available. Powder coated paint finish. These products are not fire proof.

Acid Cabinets

Control of Substances Hazardous to Health Regulations apply to virtually all UK workplaces. There are mandatory requirements for employers to carry out Coshh Risk Assessments. Substances hazardous to health are those products that are capable of causing adverse effects or disease arising out of exposure from work activities. It is the employers responsibility to gather information on these products and either eradicate the risk or at least control it. Any substance labelled as Toxic, Irritant, Poison, Corrosive or Harmful fall within identifiable categories defined by Coshh.

Labelled 'Corrosive'

Coshh, Pesticide and Acid cabinets are manufactured to the same height specification as Hazardous Substance cabinets.

Pesticide Cabinets

Labelled 'Poison'.

Guidance to Locker Room Design

Important factors to consider

Minimum distances to allow clear movement of users in gangways.
In dry changing room environments lockers can be floor mounted.

- (1) The size and configuration of the locker compartment will be determined by the items to be stored e.g the need to hang garments, size of bags/holdalls, the storage of motor cycle helmets and footwear etc.
- (2) There may be a need to store work wear separately from personal clothing if so then PPE or Clean/Dirty locker options are available.
- (3) If hygiene is important consider a factory fitted sloping top option on lockers. This prevents an unwanted build up of dirt and debris and also encourages storage within the locker and not outside. Locker stands can provide cleaning access to beneath the locker.
- (4) Check floor surfaces are level, lockers are designed to be floor standing. To overcome uneven floors locker stands are supplied with adjustable feet.
- (5) Will users be changing footwear, it would be useful to offer freestanding benches or an integral seat and stand option.
- (6) Is there a need to air damp clothing...then consider lockers where garments can be hanged or opt for a compartment locker with perforated holes in doors to increase air circulation.
- (7) Type of lock required....Key cam lock, Padlock type fitting, £1 coin return or token return lock options available.
- (8) Additional locker accessories e.g. hanging rail, sloping top, number plates etc.
- (9) Is there a need for locker compartments to be visually monitored. Perforated doors allow inspection from outside the locker.
- (10) Factors relating to the positioning and off-loading of lockers should be considered e.g. will labour be required. Nested lockers are more difficult to manoeuvre than single lockers.
- (11) Check if delivery vehicle access is sufficient.
- (12) Coloured door requirements.

General Info

Metal lockers are not intended for use in damp or wet areas. Under the Workplace (Health, Safety and Welfare) Regulations 1992 employers are required to provide suitable and sufficient accommodation for workwear and personal clothing. The Personal Protective Equipment at Work Regulations 1992 also require the provision of suitable storage to protect personal protective equipment from damage, contamination or loss.
