

Mezzanine Floors

Single-Tier Platform Structures

A Delflor mezzanine enables you to economically customise your environment and setting according to your requirements, with the knowledge that the structure will have stability, style and versatility. The ability to free span large distances, combined with design and construction techniques enables one and two-storey constructions.

Efficient use of space allows a company to operate more economically and effectively. Internal expansion is most often the rational answer to space shortage.

It then becomes unnecessary to move to larger premises with the inherent costs such as rent and relocation.

Multi-Tier Platform Structures

A mezzanine on top of a mezzanine

The majority of raised platform floors are classified as capital equipment so businesses gain the appropriate tax advantages. It is also worth noting that the majority of mezzanine floors can be relocated.
